## Laravel 7.x and 6.x Make Auth Command Tutorial

do you have question like laravel 6 php artisan make auth not working, laravel 6 make auth not working or where is php artisan make auth laravel 6 command. then i will help you how to create default authentication in laravel 6.

We must need to use laravel/ui package for php artisan make:auth command in laravel 6. so you can follow bellow step.

Laravel 6 provide septate composer package for creating auth scaffold in laravel 6 application. Whenever you require to create auth in laravel 6 then you must have to install laravel/ui package in laravel 6.

Using laravel/ui you can create simple view with auth as same you did before you do. But you have to use vue js or react js with auth view in laravel 6. But they does not provide as default you have to follow few step to do auth.

You have to follow few step to make auth in your laravel 6 application.

First you need to install laravel/ui package as like bellow:

```
composer require laravel/ui
```

After that you can run following command and check ui commands info.

```
php artisan ui --help
```

**Output:**

```
Description:
  Swap the front-end scaffolding for the application

Usage:
  ui [options] [--]

Arguments:
  type                The preset type (bootstrap, vue, react)

Options:
  --auth              Install authentication UI scaffolding
  --option[=OPTION]  Pass an option to the preset command (multiple values allowed)
  -h, --help          Display this help message
  -q, --quiet          Do not output any message
  -V, --version        Display this application version
  --ansi              Force ANSI output
  --no-ansi           Disable ANSI output
  -n, --no-interaction Do not ask any interactive question
  --env[=ENV]         The environment the command should run under
  -v|vv|vvv, --verbose Increase the verbosity of messages: 1 for normal output, 2 for more verbose c
```

You can use following commands for creating auth:

**Using Vue:**

```
php artisan ui vue --auth
```

**Using React:**

```
php artisan ui react --auth
```

Now you need to run npm command, otherwise you can not see better layout of login and register page.

**Install NPM:**

```
npm install
```

**Run NPM:**

```
npm run dev
```

Now you can run and check your app.

It will work great.

I hope it can help you....
